No weld repair statement

Dear Customer,

Stalatube Oy produces stainless steel hollow sections according to EN 10219-2 and ASTM A554 new specifications. These standards do not forbid the manufacturer to make weld repairs. Based on our Quality and Environmental Policies Stalatube Oy can't guarantee that products are free of weld repairs. Stalatube Oy does do welding repairing to tubes at times, with which an achieved economic benefit is sufficient, compared to scraping of the same tube size. If any customer ever wants to have their tubes offered, produced and delivered without corrective welding, it should be mentioned at the time of initial inquiry so that our mill knows and understands what is needed by the customer from the beginning. This need would also have an up charge in the tubes pricing, please note. As stated in the Stalatube Oy Quality and Environmental Policy "Stalatube Oy includes environmental and work safety issues in its product development, production processes and marketing activities, by striving for minimum loss of resources, both material and human, with minimum emission."

Emilia Lempiäinen
